

# Focus in Science

---

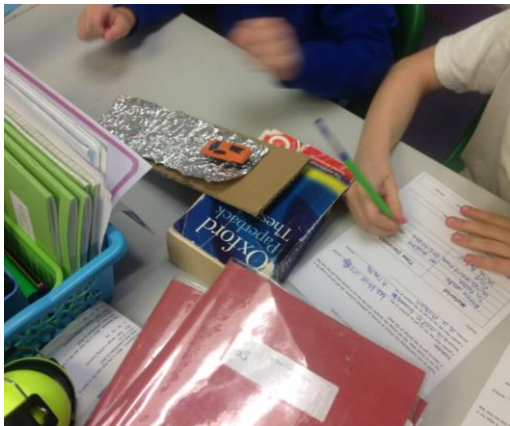

## Year 6

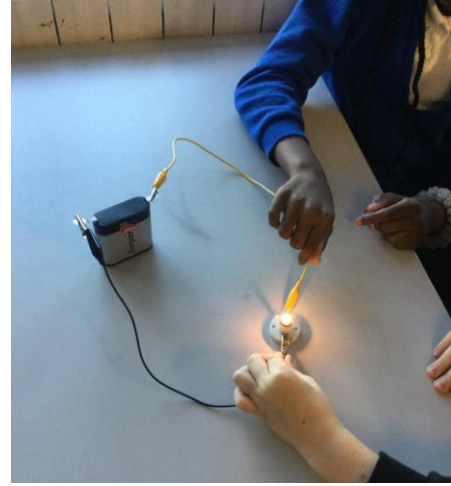

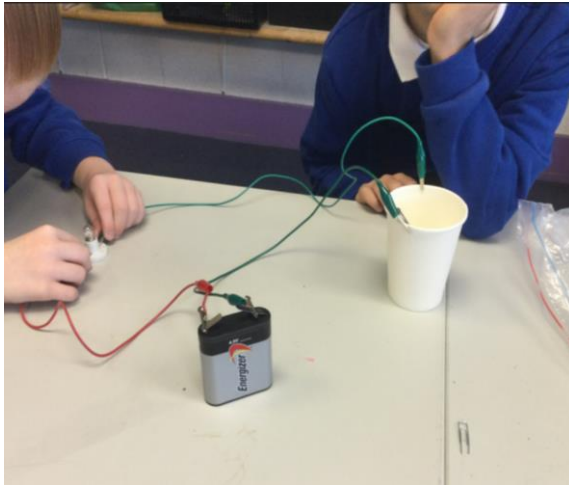

During our learning about the components of blood, we made our own blood. We added different items to represent each component. **Plasma:** water and yellow food colouring. **Red blood cells:** red food colouring and cheerios. **Platelets:** Raisins

## Year 5

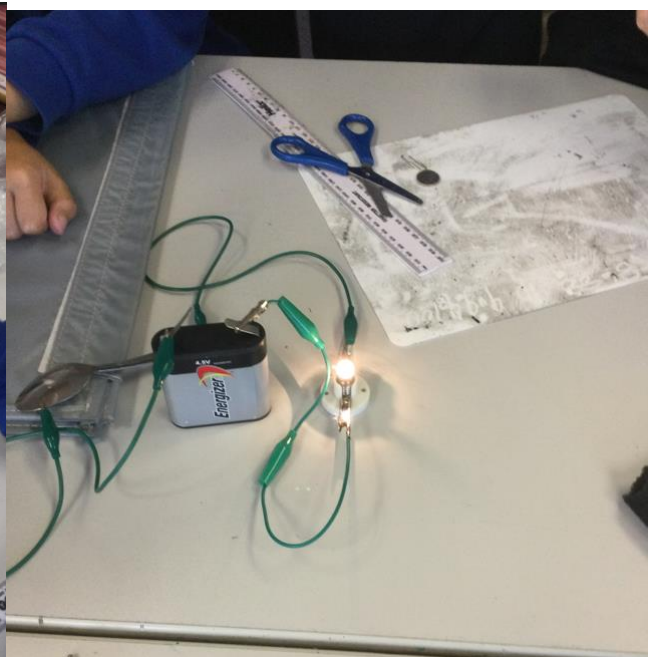

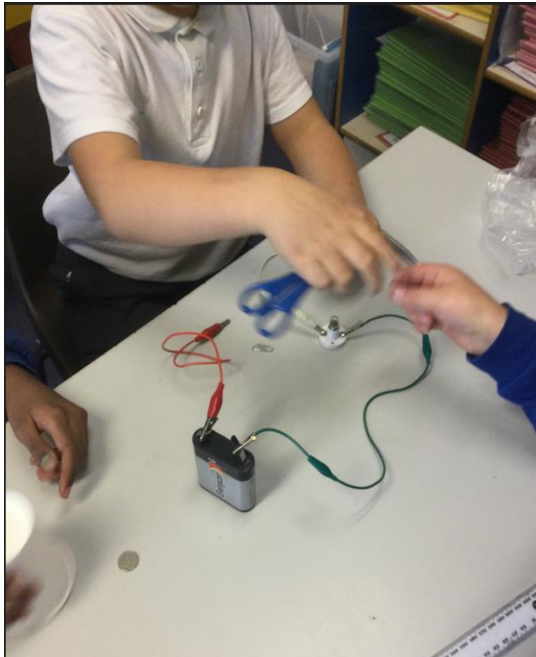

We have been investigating the forces of friction. We rode our scooters on different surfaces to see how easy or difficult it was to move. We then carried out an experiment in class placing a car on 5 different types of surfaces to see which ones allowed the car to move more easily.

## Year 4

We have been enjoying our topic on Electricity and we explored circuits and the components that make them. We learnt what is needed to create a complete circuit and the names for different components. We also carried out an experiment to test which materials are conductors or insulators.

### Year 3

Year 3 have been looking at different rocks and describing their properties. We then sorted the rocks in to different groups. We learnt their different names and have been learning about how they are formed.
