

Term 4 Science Challenge

The theme for this year's science week is "Connections" and there are lots of ways to get involved looking at all sorts of connections. Nearly all innovations in science, technology and maths are built on connections between people.

At home you could discover the different ways connections appear across all areas of life, our body, technology, plants and animals.

We would love to find out what connections means to you.

Don't forget to send your work to –
